

Andrej Kolić

SOFTWARE ENGINEER

PROFILE

I build systems that carry real businesses at scale: from national lotteries and sports betting, through e-government and SEO, to NFT marketplaces and real-time crypto trading. I go after the hard part: the architecture that decides if a product survives its own growth, whether I'm writing the code or leading the team that does.

Currently focusing on agentic development and building open-source tools that make it reliable on production codebases.

EXPERIENCE

Personal projects — *Open-source AI developer tools*

JUNE 2026 - PRESENT

Designed, built and published tools that make AI-assisted development reliable on real projects:

- Grounder: persistent project memory for AI coding agents, available as a command-line tool and a VS Code extension *(TypeScript, Node)*
- Playbook: engineering standards for AI coding agents, applied across Claude Code, Cursor and other tools *(AI, Markdown)*
- usage-bar: an add-on for Claude Code that shows AI usage and cost limits at a glance *(TypeScript)*

Kraken / Payward, Berlin — *Senior Software Engineer*

JANUARY 2026 - JUNE 2026

- Designed and maintained resilient, scalable frontend systems, applying advanced architectural patterns to ensure high fault tolerance and system health *(Typescript, React, Zustand, Redux, WebGL, TradingView, Tailwind, WebSockets, TanStack Query, Core Web Vitals, Cypress)*.
- Participated in technical strategy and architecture discussions, shaping product direction and establishing engineering best practices across cross-functional teams.
- Delivered complex software initiatives from inception to launch, driving process improvements and accelerating development velocity.
- Mentored engineers across experience levels through actionable code reviews and technical guidance to support team growth across multiple units.

Project specifics omitted: this work is covered by non-disclosure agreements.

SKILLS

Javascript, Typescript, Java, SQL, Ruby, Dart, C#, C++

React, React-Router, Redux, Relay, Angular, MaterialUI, StyledComponents, ReactHookForm, ReactQuery

NodeJs, Turborepo, Nx, Vite, Webpack, EsBuild, Babel, Jest, Playwright, Puppeteer, ESLint, Prettier

ExpressJs, Spring framework, Java Enterprise, Ruby on Rails

HTML, CSS, SCSS, Bootstrap, TailwindCss, CSS Modules, Web Workers, Web APIs

React Native, Cordova

HTTP, REST, GraphQL, OAuth2, JSON Web Token

PostgreSQL, MySQL, Oracle, DB2, MongoDB, Redis

Git, GitHub, GitHub Actions, Husky, CommitLint, SemanticRelease, TravisCI, Jenkins, DataDog, Sentry

AWS, Google Cloud

Scrum, Kanban, Code Review

User Experience, A/B Testing, Design, Optimization

Personal projects — *Real-time trading client*

2026

Designed, built and published tools that make AI-assisted development reliable on real projects:

- Rookie Trader: real-time crypto trading dashboard built on the Kraken API, with live market data and account activity. Uses a layered architecture and a serverless authentication backend on AWS. Built on my own monorepo starter template. *(React, TypeScript, RxJS, WebSockets, AWS)*

Pink.gg / Spielworks, Berlin — *Senior Software Engineer*

MARCH 2023 - NOVEMBER 2024

- Engineered and scaled AtomicHub, a leading NFT marketplace on the WAX and EOS blockchains *(web3, Typescript, React, ExpressJs, Jest, PostgreSQL)*
- Expanded platform reach and user accessibility by adding support for IMX, Polygon, and Immutable ZkEVM blockchains.
- Unified the marketplace experience by consolidating separate chain-specific platforms into a single, multi-chain solution.
- Optimized platform performance and streamlined development workflows by implementing architectural improvements and process optimizations.
- Collaborated with cross-functional teams (Product, Design, QA, Support) to define feature specifications and prioritize development, aligning technical efforts with business objectives.
- Facilitated a seamless post-acquisition transition and integration of AtomicHub into Spielworks' operations.

Searchmetrics, Berlin — *Senior Software Engineer*

JUNE 2017 - DECEMBER 2022

- Enhanced customer satisfaction by replacing legacy SEO system with modern SPA + Microservices *(React, Redux, GraphQL, Express, Jest, Puppeteer, Spring Framework, PostgreSQL)*
- Accelerated feature delivery and optimized development processes through the engineering of a micro-frontends solution *(React Typescript, Node.js, Webpack, Module Federation)*
- Increased sales by integrating Infragistics Reveal BI solution for embedded analytics as micro-frontend module of SEO suite *(React Typescript, MaterialUI, StyledComponents, ReactQuery, Jest, AWS, S3)*
- Streamlined user experience by implementing Single Sign-On (SSO) across the company's product portfolio *(OAuth2, JSON Web Token, Java)*
- Improved organizational efficiency by actively participating in company restructuring initiatives.

System Architecture, Test Driven Development, Systems Integration, Domain Driven Design, Data Visualization

Leadership, Collaboration, Project Management

LANGUAGES

Fluent in English and Serbian, conversational Portuguese

HOBBIES

Fitness, photography, cycling

8fit, Berlin — *Senior Software Engineer*

FEBRUARY 2016 – MARCH 2017

- Increased number of subscribers of fitness and nutrition mobile application by gradually migrating features to more powerful hybrid implementation *(React Native, Redux, Ruby on Rails, A/B Testing)*

Nortal, Belgrade — *Senior Software Engineer / Team Lead*

NOVEMBER 2011 – JANUARY 2016

- Improved ranking and usability of e-government portal at Ministry of Commerce and Industry (MoCI) in Sultanate of Oman by replacing poorly designed and over-engineered monolithic system with Spring services *(Spring Framework, Websphere, Oracle, DB2)*
- Expanded user base by leading team of engineers in development of mobile app for MoCI *(Angular, Cordova)*
- Enabled new set of services offered by MoCI by implementing data driven documents and interactive visualization tools for large data sets *(Angular, D3, Canvas)*

GTech / Finsoft, Belgrade — *Software Engineer / Java Developer*

FEBRUARY 2007 - SEPTEMBER 2011

- Drove revenue growth by developing and integrating a sport-betting module into GTech's embedded retail terminal *(Java, SwingUI)*
- Expanded market reach into Latin America (Chile) and Asia (Singapore) by implementing a robust online portal for national lotteries *(HTML/CSS, Javascript, Flash, ActionScript, ASP.NET)*

EDUCATION

College of Electrical Engineering, Belgrade — *Bachelor Degree in Computer Science*

Advanced course for talented students.

Faculty of Organizational Sciences, Belgrade — *Graduate student in Information Technologies*
